

Manugraph announces participation in Drupa 2012

The countdown to Drupa 2012 "Olympics of the Print Industry" has begun and Manugraph has geared up to participate in the same. The period between 2008 & 2012 Drupa has been a volatile one for the entire industry. However Manugraph has maintained growth in spite of all these hardships by launching unique products suitable to the customer's requirement.

Manugraph will occupy 241 sq Mts booth in Hall 6, Stall E 80 - 1 & 2. The M360 tower of 36,000 cph & Hiline Express tower of 50,000 cph which are solutions to the current and emerging printing requirements will be displayed in static condition.

With **Hiline Express**, Manugraph offers a sophisticated product in the range of 4-page Rotary Presses, especially suitable for high-class quality printing of newspapers and semi-commercial products at an economic cost.

What is unique about Hiline Express and deserves special mention is its commercial type of ink train technology : a 10-roller ink train with 3 ink forme rollers of differing diameters and 3 water-cooled oscillators, complemented by a zone-wise controllable Spray Dampening system.

This technology:

- Maximizes print contrast and solid density.
- Minimizes dot gain and ghosting.
- Provides sharp dots & perfect dot reproduction on mid tones and highlights.

And with UV or Heatset package installed, Hiline Express becomes the machine of choice for newspaper printers, who also wish to do high class semi-commercial color work on a wide range of substrates. With Hiline Express, Newspaper printers can thus produce colorful inserts, supplements, magazines and brochures, as well as daily newspapers with hybrid printing is also possible.

M360 is a single width, single circumference press and is the latest addition to the Manugraph stable, which has originally been designed by MDGM, USA. With a maximum speed up to 36,000 cph and an excellent price performance ratio, M360 meets the printing requirements of small & medium circulation newspapers and semi-commercial Printers alike. With its inbuilt flexibility, M360 is capable of printing broadsheet, tabloid, and quarter-fold products. Short web path ensures superior print quality and reduced waste. Pneumatics, Brush dampening & Motorized registration are standard features of M360. Besides complete press, it is also an excellent choice for "add-on" requirements.

Manugraph welcomes One & All on 3rd May at Dusseldorf; Germany!
