

***A Partnership of World Class Japanese and Indian Technology.
Announcing the New 4 x 1 Press by Manugraph***

Manugraph has tied-up with Seiken Graphics Inc. Japan, to manufacture a highly advanced Double Width, Single circumference press at Manugraph's renowned facility in Kolhapur.

The new double width press will be manufactured under a technical collaboration between Manugraph and Seiken, having a single circumference for both, plate & blanket cylinder, as well as a host of highly improved features, together with the latest and most advanced technology on offer, from both companies.

The press will run at a speed of 75,000 cph, providing great versatility for customers with higher print runs. Offering Japanese technology at Manugraph's existing 4x1 press price level, it also comes with plenty of other benefits, like a reduction in the cost of consumables, which is, in itself a win-win for Indian consumers. Additionally, customers do not require to import 4 x 1 technology, as the new tie-up will provide great cost effectiveness, by way of an immense saving on foreign exchange, no expense on duty or shipping, easily available spare parts, and prompt and faster after sales service.

Seiken Graphics has earned the industry's trust with installations of their presses in Japan and around the world. The company has a manufacturing philosophy that promotes consistency and high quality. Combined with Manugraph's continuous innovation and advanced technology it is expected to make a great impact in the Indian market. Moreover, the Manugraph-Seiken collaboration has come at the right time, with India having the largest circulation of newspapers in the world and still growing, it is expected to see a major demand, in the double width newspaper segment having larger print runs.
